TROPICAL CYCLONE BULLETIN NO. 3

Tropical Depression "CALOY"

Issued at 11:00 AM, 29 June 2022

Valid for broadcast until the next bulletin at 5:00 PM today

HAZARDS AFFECTING LAND AREAS

Heavy Rains

- In the next 24 hours, the monsoon trough and the Southwest Monsoon enhanced by Tropical Depression "CALOY" will bring **monsoon rains** over the western sections of Luzon and Visayas. For more information, refer to **Weather Advisory No. 7 for Southwest Monsoon** issued at 11:00 AM today.

Severe Winds

- No tropical cyclone wind signal is currently hoisted for this tropical cyclone.
- The Southwest Monsoon enhanced by this tropical depression will bring **occasionally gusty conditions** reaching strong breeze to near gale in strength over Extreme Northern Luzon, and the western sections of Luzon and Visayas. These conditions are more likely in coastal and mountainous/upland localities of these areas.

HAZARDS AFFECTING COASTAL WATERS

The tropical depression and the enhanced Southwest Monsoon will bring **moderate to rough seas (1.2 to 3.4 m)** over the seaboard of Northern Luzon and the western seaboard of Central and Southern Luzon. **These conditions may be risky for those using small seacrafts.** Mariners are advised to take precautionary measures when venturing out to sea and, if possible, avoid navigating in these conditions.

TRACK AND INTENSITY OUTLOOK

- Tropical Depression "CALOY" is forecast to remain almost stationary or move generally west northwestward today before turning northwestward tomorrow through Friday morning. On Saturday (02 July), "CALOY" will turn north northwestward towards southern portion of China, where it is expected to make landfall. On the forecast track, "CALOY" may exit the Philippine Area of Responsibility (PAR) within 24 hours. However, due to the present nature of its circulation, the track and intensity forecast for this tropical depression may still change in the succeeding bulletins.
- The large overall circulation and disorganized structure of "CALOY" suggest a slow pace of intensification in the near term. It is forecast to remain a tropical depression in the next 48 hours, then slightly intensify and reach tropical storm category by Friday afternoon.

Considering these developments, the public and disaster risk reduction and management offices concerned are advised to take all necessary measures to protect life and property. Persons living in areas identified to be highly or very highly susceptible to these hazards are advised to follow evacuation and other instructions from local officials. **For heavy rainfall warnings, thunderstorm/rainfall advisories, and other severe weather information specific to your area, please monitor products issued by your local PAGASA Regional Services Division.**

The next tropical cyclone bulletin will be issued at 5:00 PM today.
